Attendees: Alex, Yuri, Jakob, Rickard, Jerry and Sion

1. **Who will write minutes?**
   Sion

2. **Agree on the agenda**

3. **Action points**
   Matthijs is on holiday and so his action points will carry over to the next meeting.

   - **Matthijs: Enter tests for multiple zones (also from multiple masters) into JIRA.**
   - **Alex: Have a look at Jenkins.**
     Not done; will try over the christmas break.
   - **Jerry: Contact Nick and ask/discuss if the setup of Jenkins is usable for him.**
     Nick has documentation of the tests (about 220 of them) and loading them into jenkins is not currently viable... There is an email with more info.
   - **Jakob: Follow up on the email thread about the Auditor, and inform users about these plans.**
     Done. No response... Taken as "go ahead".
   - **Matthijs: Remove Auditor hooks from 1.4 and later versions.**

4. **Updates OpenDNSSEC**

   kasp-check has been started in c and will be finished in a few days hopefully. The tests are in ruby and will need to change a bit to cope with the new code.

5. **Updates Enforcer NG**

   new zonelist for adapter support
   Q. will <File> still be supported?
   A. no decision. But it could be done as part of the migration then no need for backwards compatibility.

   Q. If there was a clear decision on whether the xml or the database is used then the enforcer would not need to understand adapters. This will be thought about some more.

   Currently the enforcerNG has no "add zone" command; we need to decide if it is required or not.

   Users don't like editing xml so command line is probably preferable; then we need a sync / backup command. Currently we have confusion about whether the xml or the database is the master...

   Tried to get a student to visualise the state changes, but there was no interest. So Yuri wrote a python script to do the rollover and this may be able to become a graphical representation. Idea is for a page where you set your policy and a timeline of key rolls pops out.

   Waiting for the design of the import/export of keystates to migrate from enforcer to enforcerNG.

   [**ACTION** for jerry/yuri (I missed who)] Investigate the zonelist xml/database commandline/file edit

6. **Updates SoftHSM**

7. **Testing**
   Rickard tested enforcerNG and has had some bugs fixed.

8. **Next meeting**
   9am GMT / 10am CET 17th January 2012

9. **AOB**
   Have a very Merry Christmas!

10. **Actions For Next Time**

- **Matthijs: Enter tests for multiple zones (also from multiple masters) into JIRA.**
- **Alex: Have a look at Jenkins.**
- **Matthijs: Remove Auditor hooks from 1.4 and later versions.**
- **Yuri: Investigate the zonelist xml/database commandline/file edit**
